Bio-Chel™ Ca

10% CaO w/v

Bio-Chel Ca is a multifunction calcium chelate complex, providing growers and farmers with a new source of available calcium for use where soils or substrate require a form that does not contain nitrogen or chloride.

It is an excellent source of complexed, liquid calcium, a necessary requirement for healthy growth.

CROPS

For use in all agricultural crops, vegetables, fruit crops, vine and citrus crops and ornamentals.

RECOMMENDATIONS

Drip irrigation for substrate grown crops: Use 7-15 litres per ha per week from planting through to end of harvest for fruiting and flowering crops. For vegetable crops with a higher calcium demand, apply every 2-3 weeks at normal injection rates. Bio-Chel Ca levels can be adjusted to suit individual crop requirements.

Soil application: Use 20-30 litres per ha as a base dressing at planting to

promote nutrient absorption and reapply during periods of calcium requirement.

Apply in 400-800 litres of water.

Foliar application: Spray 2-5 litres per ha as a source of calcium in a minimum of 200 litres of water per ha. Use as required.

For more detailed application rates and timings for specific crops please contact your Engage Agro adviser.

PRECAUTIONS

Always read the label and follow instructions when mixing Bio-Chel Ca with other fertilisers and pesticides.

Bio-Chel Ca is compatible with most products, however when mixing with multiple products or new products for the first time a jar test is recommended. Avoid mixing Bio Chel Ca with other fertiliser mixes containing high levels of phosphates or sulphates.

- Do not breathe dust or spray.
- Wear protective gloves/protective clothing/eye protection/face protection
- Wash hands thoroughly after handling
- **IF IN EYES:** Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing.
- May cause serious eye damage
- If ingested in large quantities immediately call a POISON CENTRE or doctor/physician.
